

Audit Advantage PCI – Breach Protection Enhancements

The ongoing threat of data breaches is a reminder that every business is required to validate Payment Card Industry (PCI) compliance, no matter their size. Every organization that handles credit card information is required to adhere to the PCI Data Security Standards. Even businesses that do not store credit card information and use PCI compliant hardware/software are still required to demonstrate compliance.

Validating compliance is the first line of defense against a credit card breach; however, data breaches can still occur. That's why everyone that uses Audit Advantage PCI has the peace-of-mind knowing that they are protected by a world class breach protection program at no additional cost. In an effort to offer a best-in-class merchant data breach program, Audit Advantage PCI recently included several enhancements and improvements to the program.

Here are some of the primary benefits offered to everyone enrolled in Audit Advantage PCI:

- \$100,000 of breach and cyber liability protection for each merchant ID and up to a \$500,000 limit of liability for merchants with multiple merchant IDs.
- Covers forensic investigations imposed by card brands for a suspected or actual breach of personally identifiable information
- Covers fines and fees imposed by card brands for a suspected or actual breach of personally identifiable information
- Covers Privacy Event Expenses that include notification costs, identity theft education and assistance and credit file monitoring to breached parties with insurers prior written consent

In addition to the list above, here are the new enhancements to the breach protection program offered with Audit Advantage PCI:
