

Language of Addiction. Why Words Matter.

Many people who are unfamiliar with Substance Use Disorder (SUD), may find themselves unintentionally using **words** that **perpetuate** negative **stigmas**. These words shape the opinions of others, **reinforce** longstanding **stereotypes**, and have been found to adversely **affect** quality of care and **treatment outcomes**. They may also deter help-seeking among those with substance use disorders **and** their **families**.

Remember, people are more than their health problems. Substance Use Disorder does not describe what a person is, but rather describes what a person has.
