

DESIGNER GENES: WHAT'S THE DRESS CODE?

The ability to manipulate human genes directly is now well established. This raises both exciting applications and deep ethical issues.

Please join us for a special event in our **SCIENTISTS IN SYNAGOGUES PROGRAM** (supported by "Sinai and Synapses"), featuring a pair of experts in two major aspects of gene engineering. **Dr. Richard Sherwood** of the Dana Farber Cancer Institute/Harvard Medical School will present the "eyebrow-raising" science, and **Rabbi Daniel Nevins**, Rabbinical School Dean at Jewish Theological Seminary, will address the ethical issues.

Come and get engaged in a fascinating discussion of the medical possibilities and the criteria to consider in choosing among them.
