

eVox® System

Billing and Coding

CPT Codes commonly used for EEG assessment & analysis are found below. When used in conjunction with certain ICD-10 codes, existing physicians have reported successful reimbursements.

CPT Code	Description
96120	Neuropsychological testing by computer
95957	Digital Electroencephalogram (EEG) Analysis
95816	Electroencephalogram (EEG) recording including awake and drowsy
95930	Visual evoked potential (VEP) testing
92585	Auditory evoked potentials for evoked response
93040*	Rhythm Electrocardiography (ECG), 1-3 ECG leads with interpretation and report

CPT Codes above are provided for example purposes only. Consult your billing service provider for additional information. Evoke does not provide guarantee of reimbursements. In conjunction with the above CPT codes, physicians should select the most appropriate ICD-10 code(S) with the highest level of detail to describe the patient's condition. Medical necessity determination is the responsibility of the physician.

The eVox® System is a Class II medical device that has received Section 510(K) clearance from the FDA. It is intended for the acquisition, display, and storage, of electrical activity of a patient's brain including electroencephalograph (EEG) and event-related potentials (ERP) obtained by placing two or more electrodes on the head to aid in diagnosis. The eVox System has the added capability to be used as a biofeedback device, where such an intervention is indicated.

* CPT code 93040 is performed to inform and help physicians plan individualized biofeedback
