

Activities for the summer

As the school year winds down you might be thinking of different ways to keep the kids entertained over the summer holiday. Here are a few things that you may not have thought about that you can do on those rainy days when the pool/splash pads are not available.

If you haven't heard, or didn't notice the planes flying overhead, the Memphis Belle has been unveiled at the National Museum of the USAF. If you want to wait a bit until the crowds die down to go see the Memphis Belle, then go on one of the museums Family Days. The next one is June 16th and features the Science of Sports. There are different demonstrations around the museum that are kid friendly and sure to keep everyone entertained.

The Armstrong Air and Space museum, just a little north of Dayton in Wapakoneta, is home to a wonderful space museum. In July, they are celebrating the Summer Moon Festival to honor the Apollo 11th landing on the moon. Lots of activities and fun things for the whole family are planned.

As always, you have the local library, which hosts a wide variety of programs over the summer. The next STEM program at the Kettering/Moraine library is on May 30th and features the Science of Sound.
