Metal Clay is a relatively new product. It consists of microscopic particles of metal in a moist organic binder. It is pliable like clay and is then fired in a kiln to burn off the binder and fuse the particles into a solid piece of metal. In this metal clay open studio, projects will be presented that allow a beginning student to acquire the knowledge, skills and techniques necessary to work in metal clay. The projects presented will also have versions that need an extra level of skills, allowing intermediate and advanced metal clay students to learn along with the beginner students. Some project examples include hollow forms, made as simple 2-piece hollow forms for beginning students and complex multilevel hollow forms for intermediate and advanced students.
