

## DIY Technologies Joins the MiTek Family

MiTek recently acquired the software company DIY Technologies who brings a unique development capability that will complement the software offered by MiTek. DIY Technologies' target market is outdoor living space projects.

DIY Technologies is not new to MiTek Builder Products as we have worked closely with Mike Heisler and his team for over ten years. Likewise; Mike provided under the hood technology for major companies such as Trex, Lowe's, Deckorators [a UFP company], Rain Bird and others.

A MiTek / Berkshire Hathaway Company

TDIY Technologies provides “virtual construction” software, enabling the design, estimation specification of a variety of construction based projects intended for the “Do It Yourself”, professional contractor, lumber yard/dealer design center and outside sales channels. The software is licensed and branded as a retailer/dealer program,

loaded with the products they sell and their costs for an e-commerce capability. DIY Technologies also provides branded software to major building material manufacturers.

The wide range of applications allows a user to structurally design decks, pole barns, free standing garages, pergolas, fence systems, hot tub environments, and sprinkler systems. Quickly and easily the software creates and visualizes, the project while at the same time estimates, specifies and creates material lists.

We welcome DIY Technologies to the MiTek family and look forward to the opportunities Mike and his team will bring to MiTek!
