

Is an additional dose or a booster dose recommended?

Individuals meeting criteria (in Table 1) for an third dose should get a matching mRNA vaccine to primary series. If this is not feasible, then it is appropriate to give either one of the mRNA vaccines.

*FDA has authorized "mix & match" booster dose using current FDA-authorized or approved COVID-19 vaccines

Per ACIP recommendations, individuals over 65 years old, adults 50-65 years old with certain medical conditions, and those in long-term care facilities **SHOULD** receive a booster. Individuals 18-49 years of age with an occupation exposure or risk **MAY** choose to receive a booster dose.

- Table 1: Moderate - Severe Immunocompromised**
- Undergoing active cancer treatment
 - Organ transplant recipient
 - Stem cell transplant recipient ~2 years
 - Taking medication to suppress the immune system
 - Moderate or severe primary immunodeficiency
 - Advance or untreated HIV infection
 - Active treatment with high dose corticosteroids

- Table 2: Booster Dosing**
- Moderna booster dose is 0.25 mL
 - Pfizer booster dose is 0.3 mL
 - J&J booster dose is 0.5 mL
