

KEY INFORMATION FOR AFTER YOUR COVID-19 VACCINE

Go to de.gov/getmyvaccine to find a location for your second dose — but wait until your second-dose due date approaches, to make sure opportunities are available. Your second dose doesn't have to come from the same place as your first. You can find one at a pharmacy near your home, maybe from your own health care provider, or even from a state-run or coordinated vaccination event. **You should receive your second vaccine:**

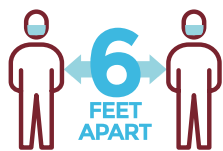

28 days after the first dose for the Moderna vaccine.

21 days after the first dose for the Pfizer-BioNTech vaccine.

If it is not possible to follow the recommendations above, the science is showing you can wait longer — up to 42 days.

Continue to protect yourself — even after both doses — and reduce the spread of COVID-19:

Maintain social distancing by keeping 6 feet or more apart.

Wear a face covering over your mouth and nose, and don't share masks.

Wash or sanitize your hands frequently.

If you feel sick, follow up with your primary care provider.

Download the COVID Alert DE app to slow the spread.

This free smartphone app protects you and your privacy. It will quickly alert you if you have been in close contact with someone who has tested positive for COVID-19.

FOR COVID-19 UPDATES: Visit de.gov/covidvaccine, call 1-833-643-1715, email vaccine@delaware.gov, and follow the Delaware Division of Public Health (DPH) on social media.
