

Community Engaged Research Co-Learning Event

Skill-Building Workshop: Stronger Through Collaboration

Join us for an interactive workshop designed to strengthen how we work together in community-engaged research. This session brings together CTSC-affiliated faculty, staff, collaborators, and community partners to explore how recognizing and leveraging each partner's unique strengths leads to more effective and sustainable research partnerships.

In a research environment that is often complex and resource-limited, success depends on collaboration. Grounded in team science and asset-based thinking, participants will:

- Identify individual and team assets
- Understand the value of interdisciplinary and community expertise
- Explore practical strategies for building stronger, more effective partnerships
