

I just want to thank You for making this amazing product available! I absolutely recommend your GH3 Formula tablets to everyone I know. I have observed my skin becoming tighter, and the surface smoother. As I turn 47 in June, I greatly appreciate this! I have lost 10 pounds without even trying over the past few months. I have also noticed major improvement in my general sense of well-being. I sleep better at night, and my mood and outlook is always positive now.

I wish I had found your product 20 years ago, I will continue taking this product for the rest of my life, and will continue recommending it to everyone who will listen! Thank You so much again for making this miracle product available to the public, and also for the incredibly informative web-site and the exceptional customer service you provide! Can I link you to my web-site? I would be happy to promote your site anyway that I can!

🚩 "... **your product is wonderful!** I convinced my husband to start GH3 two months ago because he was feeling very stressed, and a little depressed. After only one week on GH3 he began noticing a huge change in his stress level, and any signs of depression have disappeared. I've noticed a dramatic change in his moods, and he also notices a **dramatic change in his sense of well-being**. I was first introduced to GH3 over 15 years ago, through a Chiropractor I was seeing at the time. It did wonders for me at that time in my life."

🚩 "I was beginning to have symptoms of depression in conjunction with possibly starting menopause. **The GH3 has helped my mood swings enormously.** I never was a depressed person but did notice the mood swings. Those are all but gone. In fact, I just was off the GH3 for the 5 days off/25 days on, and I noticed a definite change in mood. I couldn't wait to start it again this morning. I have only been taking one tablet daily. Imagine 2!! Also, **the graying of my hair has been slowed by half.** I now color every six weeks rather than three weeks. Even the hair in my pubic region is completely rid of gray. (Not sure if that's too much info!). In summary, I am looking forward to the long-range positive effects of the GH3 on my body (and mind.) I plan to continue taking it.

🚩 "... **I believe that I am living proof of a lot of the claims that you make about your product.** In 1988, I was hospitalized for severe endogenous depression following a failed suicide attempt. At 20 years old, I honestly could not fathom the idea of wanting to live. I was lucky enough to have a very good psychiatrist who started me on an MAO Inhibitor, Nardil.

I can't even begin to describe how that experience changed my life. Anyone who knows me, including my parents will tell you that a different person was born. I remember driving in my car and thinking, wow this must be how normal people feel. No words could ever describe how profoundly those **2 little orange pills changed**

my life. A few years later, I discovered that I have Huntington's Disease, which is an inherited neurodegenerative disorder similar to Parkinson's and Alzheimer's. I have always known, intuitively, that my depression was related to this. I've also known that the MAO Inhibitor was somehow protecting the old neurons.

Of course, no one, including my neurologist who is one of the most highly respected doctors in HD research, has ever believed me or recognized the significance of what I have stumbled upon. In my last appointment with him, when I asked him what he thought about the research that was being done with Parkinson's Disease using the MAO-B Inhibitors. He was not even aware that it was being used. Wouldn't you think that a person who was supposed to be an expert on a neuro-degenerative would occasionally peruse the research that was being done in similar diseases?

All of this rambling does have a point, which hopefully you've gotten by now. I think that we can help each other. I found your web site by accident when I was doing an internet search for articles on MAOI use in Parkinsons. Over the past 15 years, I've paid out more money than I care to think about to what are supposed to be the most respected doctors in medical science.

They've had me taking a medication that has the potential to have fatal side effects. And all the while there has been a safe and inexpensive solution to my problem. I truly understand the significance of this discovery (GH3) and the potential it has for improving the quality and longevity of the lives of thousands of people with life-threatening illnesses.

My intuition tells me that we did not meet by mistake. I would be very interested in talking to you, or anyone else, who is working to make GH3 available.

I'll close with a heartfelt thank you. **No words could ever express how profoundly your efforts have affected my life.**

▼ "As you know I have had a major illness for 25 years, and virtually had an inactive life for the past ten years and a very poor attitude.
