

**BOSCH**

Invented for life

## Get connected with Remote Portal

A free and secure  
cloud-based service

## Device management with Remote Portal

Bosch Remote Portal makes remote connection to customer systems quick and easy.

With a few clicks installers can monitor connected cameras and recorders, and perform maintenance tasks supported by the cloud, remotely or even while on site. The free cloud-based service offered by Bosch enables remote connectivity and management of Bosch cameras and recorders, and serves as the hub to activate for-fee services that include Alarm Management/Monitoring, Event-based Recording and In-Store Analytics. It also serves as the access point for apps that are installed on the latest INTEOX cameras.

### Two services included at no cost:

#### Remote Alert

Proactively monitor your system health status as it relates to connectivity, recording status or firmware availability. Remote Portal then notifies users such as customers, technicians, or administrators, based on configured triggers.

#### Remote Connect

Allow secure connections between your device, cloud, or software remotely. Enter your Remote Portal credentials to connect your devices or software, without the need for advanced network configuration or DDNS services.

- ▶ Leverage Project Assistant to set up cameras and recorders for enrollment to Remote Portal once the hardware and technician are on site.
- ▶ Use with Configuration Manager for complete camera programming without having to be on site.
- ▶ Easily connect cameras and recorders to Video Security App and Client, leveraging Remote Portal “groups” for camera organization within these applications.
- ▶ Provide your customers with simple installation and support by accessing the live video streams from their Remote Portal enrolled cameras through the browser-based Remote Portal Viewer. This also gives your customers access to their live streams for any Remote Portal enrolled camera that they have been assigned access to, even across sites.

# Additional services

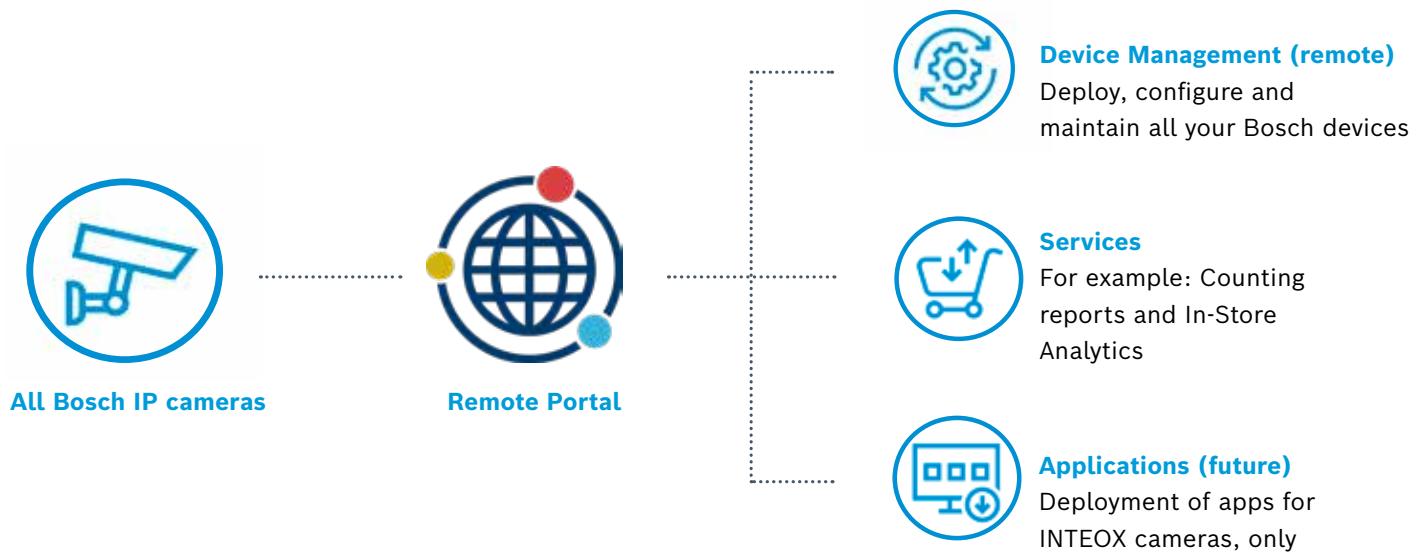

Once cameras are assigned to Remote Portal, they can then be enabled for other for-fee services, with licenses available via your normal channels for purchasing Bosch products:

- ▶ Alarm Management, Notification and Monitoring – video clips associated with camera Video Analytics alarms can be viewed on a browser interface, pushed to a smartphone or forwarded to a Monitoring Center.
- ▶ Event-based Recording – video clips based on Video Analytics are sent and stored in the cloud to be viewed later or downloaded as required.
- ▶ Counter Reports – easily customizable dashboards on Remote Portal that visualize counter values over time based on the embedded analytics of your connected Bosch cameras. Aggregate up to 12 different cameras in one dashboard and give your end customers easy access to them using their individual accounts.
- ▶ In-Store Analytics – camera metadata is used to inform retailers about shoppers' movement within their location, engagement times, queue lengths, and more.

## INTEOX with Remote Portal

Remote Portal is also the gateway for third-party app deployment on Bosch's open camera platform, INTEOX. Remote Portal enables you to establish a connection to the Security & Safety Things application store to purchase, and download apps for installation and management on INTEOX cameras.
