

# COVID-19 HAND SANITIZERS

Alcohol-based hand sanitizers can help kill germs when warm water & soap aren't available. When selecting a sanitizer, make sure it contains at least 60% alcohol to be effective.

Apply alcohol-based hand sanitizer to your palm

Rub hands together, covering all surfaces until dry

Congratulations, your hands are clean

*Always keep alcohol-based hand sanitizers out of the reach of children to avoid accidental alcohol poisoning if swallowed.*
