

CES Program

The EKG Certified Ergonomic Specialist Program is nationally recognized as the industry leader in developing your ergonomic skills.

- ✓ Learn the science behind ergonomics
- ✓ Gain knowledge in all areas of ergonomics including office, industrial, and design
- ✓ Learn to use all the current ergonomic evaluation tools
- ✓ Be able to conduct or review the various ergonomic assessment formats with confidence

Attain continuing education points for your current professional designations and gain the right to use the CES designation.

STATISTICS SHOW

In today's workplace, statistics clearly demonstrate that a significant portion of work-place injuries, or symptoms, are primarily related to musculoskeletal trauma, excessive forces or sustained effort. The is true in virtually every workplace setting.

Therefore, EHS professionals need to have a solid understanding of the injury mechanism process and causes.

TANGIBLE SKILLS

The CES program provides participants with hard skills that are specific and teach-able, such as performing ergonomic assessments, that can be defined and measured. The is the science portion of ergonomics.

Participants will also come to understand the less tangible and harder to quantify soft skills that are also critical for interacting with workers. This is the art of ergonomics.

INVESTMENT

An investment in the CES program goes a long way. First, we ensure you are able to communicate with workers and other professionals in an informed manner regarding ergonomics.

Second, you are able to undertake ergonomic assessment or review tasks due to the skills obtained and do it with confidence. This is the only ergonomic program you will ever need.

EKG Inc., in partnership with **Motor Safety Association**, aims to provide high end ergonomic skills to employers and individuals. Such training will promote success in the workplace by improving the fit between the worker, job task and the environment.
