BEERS VISITING LECTURE SERIES

Advancing Aging Research: Leveraging Frailty Biology, AI, and Technology for Clinical Innovation

PETER ABADIR, MD

Dr. Peter M. Abadir is a geriatrician and translational researcher at Johns Hopkins University. He serves as the Principal Investigator of the Johns Hopkins Artificial Intelligence and Technology Collaboratory for Aging Research and the Director of the Human Aging Project, where he leads interdisciplinary initiatives to advance innovations in aging and resilience science. His clinical focus includes frailty, cognitive decline, and age-related conditions, while his translational research bridges molecular biology, bioengineering, and geriatrics.

Medicine Grand Rounds
March 21, 2025
8:00 - 9:00 AM
Davis Auditorium or Teams

The Mark H. Beers, M.D.'82 Fund in Geriatrics supports an annual lecture at the UVM Larner College of Medicine. A Class of 1982 graduate of the UVM Larner College of Medicine, Beers, who passed away from diabetes-related complications in 2009, had an impressive career in geriatrics at the University of Miami. He is best known for establishing the "Beers Criteria," the definitive list of medications that older patients should avoid, and his role as editor-in-chief of the Merck Manuals. The Beers Fund was established by his husband, Stephen Urice, to honor Beers' legacy and remarkable commitment to easing the health burdens of older adults.
