

Addressing health care workers' frequently asked questions about monkeypox

Created: August 2022

Overview

We've created two new monkeypox FAQ videos. One, featuring Jorge Salinas, MD, co-medical director of the Infection Prevention and Control Program at Stanford Medicine, addresses general questions about the virus. The second, with Bryan Bohman, MD, associate chief medical officer for workforce health and wellness at Stanford Medicine, is specifically for our health care workers.

The videos

Frequently asked questions about monkeypox including:

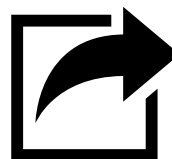

- What is monkeypox?
- What are the symptoms?
- How is monkeypox transmitted?
- What should I do if I am exposed?
- Is there a vaccine?
- What protocols are in place to keep health care workers safe?
- How concerned should people be about this outbreak?

Addressing health care workers' frequently asked questions about monkeypox including:

- What are we doing to prevent transmissions?
- What should I do if I contract monkeypox?
- What is the treatment for monkeypox?
- Can I get vaccinated?
