## **Town Center Green Construction of New Shade Structure**

Construction on an additional shade structure is about to begin at the Town Center Green. The new structure will be like the two current structures and will be placed between the current structures.

During construction, construction fencing is being placed on a portion of the decking at the Town Green. In the provided image, the four orange cones serve as an approximate location of the new structure's columns.

The bathrooms are still accessible as is the existing playground via the sidewalk in front of the stage. This fencing will be up for approximately two and a half months.

We apologize for any inconvenience as we continue to make the Town Green a wonderful place for residents, families, and visitors.
