Advanced Traffic Signal Installed in Tech Park

As a part of [Curiosity Lab](#), the city's real-world test track environment, a new high-tech traffic signal is being installed at the intersection of Technology Parkway and Technology Parkway South.

The new traffic signal not only provides an improvement to the intersection in terms of traffic delay and pedestrian safety, it will also provide new opportunities for future smart city technologies development and deployment.

The new signal will create a place to test topics such as optimized cycle times, vehicle detection radar, pedestrian sensors and application interfaces, connected and autonomous vehicles, traffic counting devices and much more.

This is a very exciting addition to Curiosity Lab and can potentially help accelerate transportation technology advances.
