## **Peachtree Corners ramping up for electric vehicles**

Will the EV charging stations be used to charge an EV fleet for business use, to support employees and to attract customers? Choosing the best EV charging station for business use can be a formidable undertaking. To understand and analyze the maze of information on EV charging stations, Peachtree Corners city leaders are working with Hubject, an international company promoting emission-free mobility, to issue a request for proposals from electric vehicle supply equipment manufacturers.

The city studied 23 electric vehicle charging companies from across the globe. Through this process, the city and Hubject are now able to offer useful information and discounted pricing on charging infrastructure via a dedicated website for its residents and businesses.

Titled “Electrifying Peachtree Corners,” the dedicated website provides a guide through charging solution questionnaires and resources to help business owners better understand EV and EV charging. The new website offers special charging solutions that are only available to businesses. Recognizing the continued popularity of electric vehicles, last fall the city introduced its 16- vehicle charging plaza located at the Town Center. The plaza is the second largest in the state with 12 Tesla V3 Superchargers, two 350 kW chargers and two 15 kW chargers. Find details for both residential and business EV charging choices at [www.ptccharging.com](http://www.ptccharging.com)
