

Updating your Solid Edge license for SE 2020 – Node Locked

Note: SE 2020 license files are not downward compatible. If you are using an older version, you will want to keep using your current license file. Customers may continue using pre-v220 license in parallel during the migration to v220

Solid Edge node locked licenses will now run off your computer's HostID and what Siemens calls a "Composite2" identification. They were able to generate this Composite2 for your SE 2020 license files from the CID used by the earlier version.

- If you are having any issues, please check the CID of your computer:
 - o Click the windows start button, type license utility and a box will pop up and you will see Composite2 followed by alpha numeric characters.

- o Open your current license file in notepad and compare the CID#'s.
