March 4	10 a.m.	Glo-Crest Dairy, Clermont <i>(5909 Bowen Bridge Road, Clermont, GA 30527)</i>

In the past, management of flies in dairy and livestock barns often relied solely on insecticide use. But this single-tactic approach can aggravate fly populations' resistance to insecticides and inadvertently destroy natural enemies of flies. Today successful farmers are combining careful use of pesticides with other integrated pest management (IPM) practices.

Maxcy Nolan will review integrated management techniques to improve fly and worm population as well as coccidia. Meetings are open to dairymen and managers - free of charge - and will be held at 10 a.m. (6:30 p.m. in Williamson). A meal will be provided. Please pre-register for meal purposes by calling our office at 706-310-0020 or email at gamilkproducers@gmail.com.
