

Dr. Daniela Peña Hernandez joined the Department of Comparative Pathobiology, College of Veterinary Medicine, Purdue University this January as a graduate student and the first resident of the new Diagnostic Microbiology training program. Daniela has worked as a research assistant at Purdue College of Veterinary Medicine since 2018. Before becoming a graduate student researching multiple drug-resistant *Staphylococcus pseudintermedius*, she was a visiting student through the Undergraduate Research Experience Purdue-Colombia program. She earned her DVM degree from the National University of Colombia and worked in the poultry industry across Colombia's Atlantic coast. As a microbiology resident, Daniela follows a program based on criteria from the American College of Veterinary Microbiologists including diagnostic microbiology service in the ADDL, diagnostic research, and teaching assignments.
