

THE UNM ALUMNI LOBO LIVING ROOM PRESENTS

STATE OF THE ART RESEARCH: FROM NEW MEXICO TO AFRICA

THURSDAY, APRIL 28
6:30 PM

Physics & Astronomy and Interdisciplinary Science (PAÍS) Building
Room 1100

RECEPTION WILL BE HELD FROM 6:00 - 6:30

JILLIAN
RUTHERFORD

Launched in 2019 in the state-of-the-art PAÍS building, the Interdisciplinary Science Cooperative (Co-op) is dedicated to bringing people across disciplines together in the spirit of producing stronger research outcomes that positively impact our world.

Meet Jillian Rutherford, a first-year PhD student who is working collaboratively with the Comparative Human and Primate Physiology Center (CHmPP) and the Center for Advancement of Spatial Informatics Research & Education (ASPIRE) at the Co-op to advance our understanding of human evolution.

Through a truly revolutionary approach, Jillian is using Geographic Information Systems (GIS) to track chimpanzees in Africa from right here in Albuquerque, New Mexico. Learn how our students and faculty are benefitting from this new interdisciplinary program, find out how Jillian is increasing our understanding of these incredible animals, and tour the new state-of-the-art facility that is truly putting UNM on the map as a nationwide leader in research and education.
