WATER RESOURCES PROGRAM

FEB. 18, 2022
LECTURE SERIES

Opportunities & Experiences for Early Career Water Resource Professionals

The UNM Water Resources Program is sponsoring a monthly seminar program to give students an understanding of life-after-UNM for young professionals entering water-related fields in the public, private, utility, and commercial sectors. A second objective of the seminar series will be to explore some of the major water issues facing New Mexico by inviting leading water managers to discuss the challenges they face and their thoughts on new strategies for meeting them. The seminar series will be open to all students and members of the public who are interested in water issues in NM and the southwest.

Our first seminar will consist of presentations by graduates of the UNM Water Resources Program who are now practicing in the profession. They will describe the progression of their careers and offer suggestions for students who are considering joining the profession.

A third objective of the seminar series will be to reestablish the Association of Water Professionals, the interdisciplinary student group that sponsors professional and social functions for students and faculty working in water-related fields all across campus. Following the meeting we'd like to get together with the students and plan an event or two.
