

Water Outage

Where I live might have a water outage.

This might happen because of a broken pipe or pollution.

When this happens, I might not have any water coming out of my sink, shower, or toilet.

This could also mean I might have water to use, but I need to boil it before I use it

My water supplier can tell me when the water is safe.

The water in your home will be safe to use after 5 pm.

If I am not sure, I can get bottles of water from the store.
