

Ready to increase production with via fill? Look no further.
Introducing the THP35-01

Double your filling capacity with the THP35-01 Single Filling Chamber. This module can easily be added to any existing hole filling machine in your facility. It comes with all the bells and whistles. Just position it next to the hole filling machine you already have and use the scavenger module from the existing machine. The THP35-01 has great process capabilities and uses the extremely high local vacuum with our patented filling head system, like the full THP35 machine, but with a huge price advantage.
