

INTERDISCIPLINARY STEM SEMINAR SERIES

(Science Technology Engineering Mathematics)

Women in FOREST SCIENCE

Wednesday, March 21st, Reuter Center, Room 102A
4:30 PM to 6:00 PM

Speakers:

Moderator: Dr. Hermann Gucinski

Panelists: Dr. Susan Loeb, Dr. Jennifer Knoepp,
Dr. Dominique Bachelet, Dr. Viniece Jennings,
Dr. Michelle Baumflek

Forest science is, in part, the study of the threats forested ecosystems face on both the local and global scales.

In this discussion, a 5-person panel of various backgrounds and experiences, will describe what they have learned and experienced themselves in forest science, especially as it pertains to the acceptance of women in this field.

The panelists will use examples and hard-won insights to show what women have contributed, what obstacles were overcome, what challenges remain, and where the progress we expect and want will take us. They will consider what consensus is likely to emerge, and how we can make the path into the future a better one, using a meaningful egalitarian approach.
