

# Voluntary Residential Soil Testing Within Northport Town Limits

Lead and arsenic have been found at elevated levels in soil in and near Northport, Washington. In Summer 2021, the U.S. Environmental Protection Agency (EPA) will offer voluntary soil sampling to property owners located within the Northport town limits. Eligibility is currently limited to residential properties that have not been previously tested. We are reaching out to eligible property owners by the end of July to offer participation in this sampling event. For those properties where the landowner or property representative provides consent for voluntary soil testing, EPA plans to sample in Summer/Fall 2021. Soil sampling results will be provided to the landowner as soon as they are available. EPA will analyze lead and arsenic levels in sample results to determine which properties may need additional action.

If you have questions or concerns, or would like to inquire about the eligibility of your property, please contact the following people:
