

You are invited to a luncheon seminar being held by Menarini Silicon Biosystems

DEPArray™ Technology Enables Automated, Precise, and Pure Target-Cell Recovery

Case Western Reserve University

Date: Monday, July 22nd, 2019, Lunch at 12:30, Seminar at 1

Location: Wolstein Research Building, Room 3-136

Presenter: Raimo Tanzi, Ph.D., Chief Market Development Officer

**RSVP
TODAY!**

Discover the **DEPArray NxT™**, our revolutionary system for isolation of single cells or pure cell populations from solid tumor, liquid biopsy and FFPE specimens, even for samples with low cellularity.

By resolving sample heterogeneity, **DEPArray NxT™** enables the full power of NGS analysis for any sample type, eliminating genetic background noise.

LIQUID BIOPSY

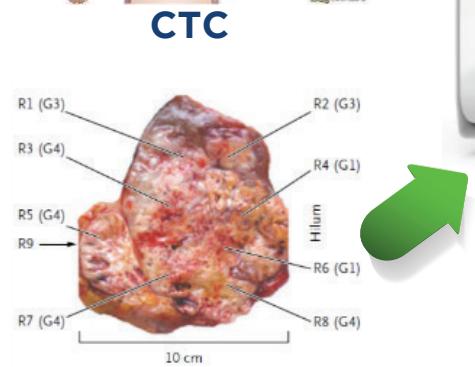

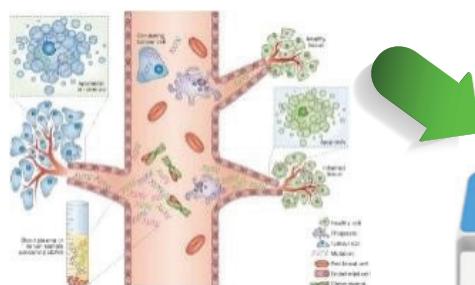

We will present our integrated workflow to enumerate, isolate and analyze single CTCs and other rare cells using CellSearch®, DEPArray™, and *Ampli1* technologies.

SOLID BIOPSY

Protocols for disaggregation and staining of **FFPE samples** enable to use DEPArray™ digital sorting to isolate pure tumor cell populations, even in low cellularity epithelial origin tumors samples. This workflow enables accurate analysis of Copy Number Variation and somatic mutations from single cells or pooled pure cell populations.

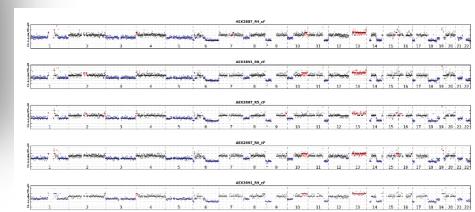

GENOMIC ANALYSIS

Single CTCs are processed using the *Ampli1™ Low Pass* genome NGS workflow to obtain highly accurate Copy Number Aberration profiles which enable the real-time analysis of **tumor heterogeneity** and determine the correlation of each clonal population with drug resistance/response.

DEPArray™ isolation

Ampli1 Genetic Analysis
