

Teen Boys Needed For Research Study

The Olin Neuropsychiatry Research Center of Hartford Hospital/Institute of Living seeks right-handed teenaged boys (ages 13-18) **without** ADHD to participate in an MRI-based study.

Qualified volunteers will participate in an interview, reward-based tasks, some questionnaires, neuropsychiatric tests and a non-invasive brain imaging scan.

Volunteers will be compensated 20 dollars an hour for their time, plus bonus money for reward tasks. The study is expected to take 8-10 hours total and can be split into separate visits, if desired.
