

Lodestar Structures – Advancing Precast Innovation

Lodestar Structures is transforming the way buildings are constructed with our patented precast concrete building system. Designed for speed, strength, and sustainability, our system enables projects to be completed more efficiently and at lower cost, while delivering lasting performance.

A proven building system: Each product is engineered and manufactured to strict tolerances, ensuring versatility for use in residential, commercial, institutional, and multi-story projects. Lodestar’s precast foundations, precast wall panels, and precast structural frames provide a rapid construction method of unmatched durability, precision, and adaptability. Maintaining a consistent track record of completing projects at rates of superstructure construction more than 12,000 square feet per day, with 1 crane and a crew of 4 labourers, using standard hand tools. The system provides the construction industry with an advanced building method, **scalable to satisfy a broad scope of building and development types**, using familiar reinforced concrete material, allowing more buildings to be erected faster, without compromising quality, sustainability, or safety.

With a commitment to innovation, community impact, and environmentally responsible construction, Lodestar Structures is setting a new benchmark for building systems across Toronto and beyond.

Lodestar Structures are currently supplied in Ontario by **Anchor Concrete Products** (Kingston Ontario), with multiple regions within Ontario available to additional Precast manufacturers to service.

With Lodestar Structures, project owners benefit from **accelerated construction schedules**, contractors benefit from **simplified construction processes**, and communities benefit from **faster access to safe and comfortable places to Live, Learn, Work, and Play**.

Design and build your next building using Lodestar Structures Building System, **save time, save money, and rapidly achieve more**.

Lodestar Structures

Precast Concrete Building System

Attention Builders & Project owners

Erect buildings up to **90% faster**
using minimal labour & equipment

The Lodestar Structures Building System provides project-specific "Kit of Parts", consisting of the essential components to erect safe and secure buildings, with minimal labour and equipment resources.

A proven building system used to erect over 12,000 square feet per day, with a crew of 4, 1 crane, and standard hand tools. The system provides the construction industry with an advanced building method, using familiar material, allowing for more buildings to be erected faster, without compromising quality, sustainability, or safety.

Reducing construction time translates into less project management, less uncertainties, and allows projects to gain occupancy sooner.
