

Intuitive AI is a technology firm that develops cutting-edge artificial intelligence to empower healthier buildings. Healthy buildings are the key to controlling and preventing the spread of infections.

Intuitive saw that the key to reducing the spread of infections was to eliminate touchpoints by developing contactless systems that adapt and change as buildings do. Another essential is for these systems and tools to evolve alongside new research and regulations. Intuitive AI saw a need for AI-powered technology to assist businesses in meeting this challenge. Intuitive developed Oscar Hygiene as a shield for healthy buildings to reduce the spread of infections and keep visitors safe. Oscar Hygiene performs all entry protocols in a contactless way using deep learning combined with computer vision. Oscar has been proven to increase hygiene by 7X. Oscar performs the following tasks:

1. Non-invasive temperature sensing
2. Contactless check-ins
3. Touchless contact tracing
4. Mask Compliance
5. Occupancy and visitor sensing
6. Intelligent Hand Hygiene - according to WHO guidelines

In addition to removing the need to add headcount to a business, Oscar Hygiene simplifies the process of performing these tasks easily, thoroughly, efficiently, and contactless.

Intuitive is transforming the way AI technology empowers buildings to be healthier and efficiently operated. The goal is to make people's lives easier, more streamlined, safer, and efficient. Intuitive puts people at the center of the technology, always considering how their lives and well-being can be enhanced by AI.
