

Why get COVID-19 vaccine?

Getting vaccinated protects against severe illness from COVID-19, including the Delta variant.

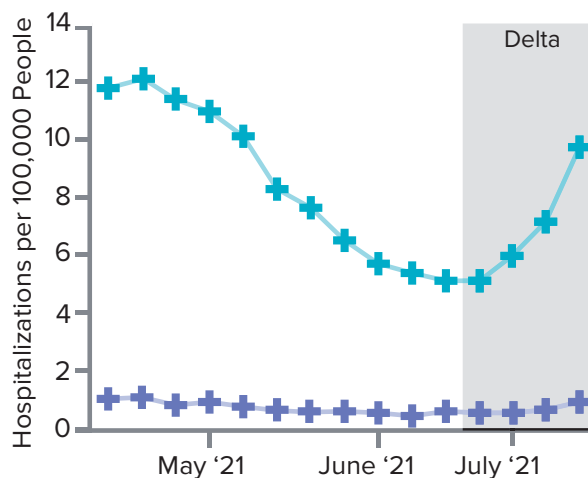

Recent data from the Centers for Disease Control and Prevention (CDC) shows, after Delta became the most common variant, vaccinated people reduced their risk of infection by five times, and hospitalization and death more than tenfold.

When you're vaccinated, you're:

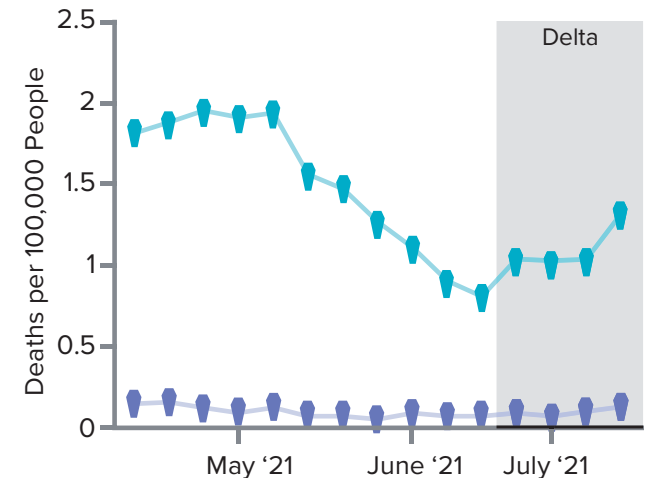

5x less likely
to be infected with COVID-19

10x less likely
to be hospitalized from COVID-19

10x less likely
to die from COVID-19

Unvaccinated **Vaccinated**
