ABOUT US

For more than three generations, Buchbinder Tunick & Company, LLP has been one of the premier accounting firms in the United States. We provide hands-on tax, accounting and audit, and assurance services for various industries.
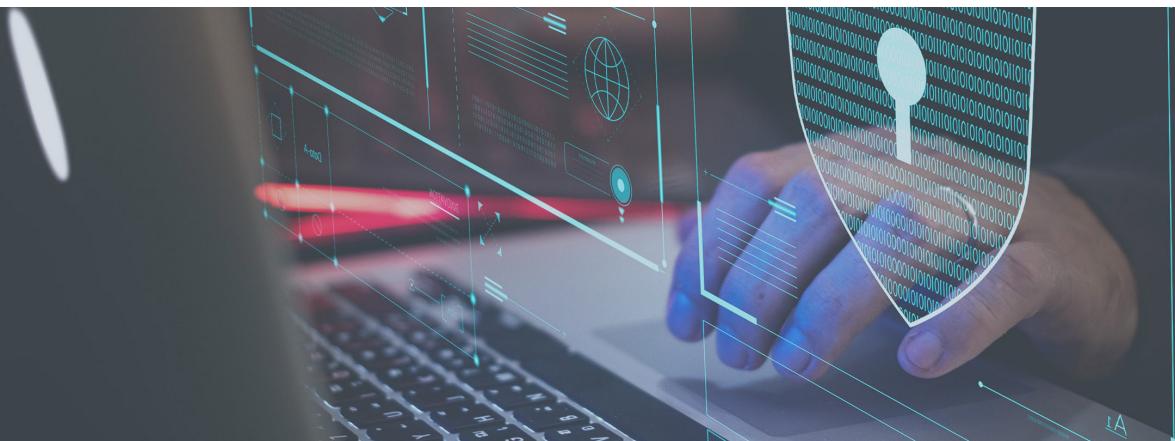

Buchbinder has decades of expertise in specialized niche areas. Many of the industries we serve and the services we provide have been core to our firm since our founding in the 1940s. Our practice groups are comprised of team members with industry specific expertise serving organizations like yours. We keep up with changes in your industry and understand your challenges. We help you stay compliant while you focus on carrying out your organization's mission.

Buchbinder's primary focus is to provide our clients with exceptional, thorough, knowledgeable, and accurate accounting services done the right way the first time. Our clients are our priority in everything we do, from scheduling our engagements to accommodate their needs, to returning phone calls and e-mails within hours, not days. It's standard practice at Buchbinder. Learn more about us.

We offer a full array of comprehensive services:

- Audits, reviews & compilations
- Agreed-upon procedures
- Tax preparation & planning
- Advisory & consulting
- Business valuation, litigation support, & forensic accounting
- Commercial & family back office services
- Cybersecurity services
- Peer review
- Service Organization Controls (SOC) reporting

Cybersecurity services and Service organization controls (SOC) reporting are the most relevant to the association members.

CYBERSECURITY

Buchbinder developed BITS (Buchbinder Information Technology Solutions) to help your organization understand and mitigate its cybersecurity risks. Unlike most cybersecurity review methodologies, our innovative approach looks at both the technical and operational aspects of your business to provide a comprehensive analysis of your cybersecurity risks from internal and external threats.

Using the latest technology, our vulnerability scanning tools provide the detailed technical analysis of your cybersecurity environment while our IT operations review delivers an overview of your IT management controls, which are critical building blocks in preventing cybersecurity attacks.

SOC REPORTING

We specialize in assessing and attesting for internal controls, and we are often engaged to provide SOC reporting and consulting services to help companies like yours through the process in an efficient and effective manner. We offer readiness assessments, SOC 1, SOC 2, and SOC 3 audits.

By taking a proactive approach to your SOC reporting, readiness assessments and audits, you can create one set of reports that can be used to satisfy multiple client requests and inquiries – an option that proves much more efficient than going through the audit process multiple times or accommodating a different group of auditors for every individual client request.

For more information, contact Mike Pinna to discuss your specific needs.
