Alex Conn, Ph.D., has extensive experience as both a practitioner and professor in computer systems architecture and engineering. His primary interest is technology-based architectures that provide the integration necessary for interoperability and ongoing adaptability. "In plain English," Alex says, "that means that I like to look at the big picture (ecosystems) and figure out how everything can be designed to work together.

"I am hoping that my technical and process background may be of help with LLAIC Operations. I joined LLAIC a couple of years ago in order to participate in events and courses that my wife Ileen was enjoying. I have done ghost editing, writing, and helping with Let's Go; and we are currently working together on Movie Mavens. I really have enjoyed LLAIC and would like to help it continue flourishing."
