

# FEMA & Colorado Wildfire Webinars

In 2020, Colorado experienced an unprecedented wildfire season. The East Troublesome and Cameron Peak Wildfires scorched over 400,000 acres and destroyed 1,041 structures, including nearly 600 residences. Consequently, flood risk after a wildfire increases dramatically - and where it rains, it can flood. While Colorado is still recovering from these historic events, it's important to understand the increased risk and prepare for the upcoming wildfire season.

Join experts from wildfire, flood, agriculture and insurance organizations for a series of upcoming webinars discussing important recovery and rebuilding aspects as well as increased flood risk after wildfire. Panelist will answer frequently asked questions and provide informative resources you can use today.

**Want to join us? Click the dates below to register for an upcoming webinar:**

**Flood After Fire Webinar  
(12 - 1 p.m. MST, Monday, April 12)**

**Wildfire Preparation & Recovery Webinar
