

WHERE ARE THEY NOW?

BAILEY'S STORY

Bailey is graduating on June 15 from Caltech with a Bachelor's degree in electrical engineering. During her last two quarters at Caltech, she received job offers from large tech companies, but her dream was to join a startup largely because of how much she enjoyed building robots with a small team of dedicated engineers through MATE. Her career goal was to work for a company where she could "make things" again.

The startup she is joining is called Aeye (pronounced A.I.), and they are working on self-driving guidance systems for cars and drones based on light sensing using LIDAR. She will start working there a couple of weeks after graduation. As soon as Bailey walked into their office, she was sure that was the place for her.

Bailey was always a good student, but through MATE she learned she had a passion for engineering. Her parents valued what MATE afforded her so much so that they decided to become mentors for their son's team while he attended Aptos Junior High and will continue this year as well.
