SIMPLE STEPS TO STAY HEALTHY IN HOTELS

Make guest health a priority

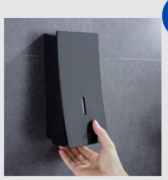

1 USE MOBILE CHECK-IN

Digital key platforms like OpenKey enable guests to use mobile check-in and receive a secure digital key straight to their smartphone - eliminating the need to stand in the line at the front desk.

2 USE MOBILE KEY

Digital keys allow the guest to use their smartphone to access common areas like fitness centers, elevators and their guestroom - often without the need to touch another surface with their hands - preventing the spread of germs.

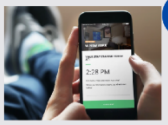

3 USE HAND SANITIZER

Most viruses are transmitted from person to person via coughing or from germs left on surfaces. Hotels should have hand sanitizer stations in common areas and encourage guests to use them frequently

4 MAINTAIN DISTANCE

Viruses are usually transmitted between people up to six feet apart. Whenver possible, maintain a safe distance from anyone who appears to be ill to prevent transference of airborne viral infection.

5 USE MOBILE CHECK-OUT

Digital key platforms like OpenKey enable guests to use their smartphone to check-out of their room, eliminating the need for them to stand in the front desk line with other people in close proximity.
