Eliminate the Spread — Workday Flow

Arrive at workplace

Leave consumables in the car

Put on a pair of disposable gloves

Enter the workplace

No skin-to-skin contact

Obtain sanitizing solutions

Disinfect your workstation

Remove disposable gloves and dispose

Wash hands

Start production

Maintain social distancing

Wash hands every 90 minutes

Put on a pair of disposable gloves

Obtain sanitizing solutions

Disinfect your workstation

Leave the workplace

Remove disposable gloves and dispose

Wash hands

Leave workplace

Arrive at home safe and sound

How to Use Chemicals Safely

In the era of coronavirus disease 2019 (COVID-19), your organization or your household may be using stronger chemicals for disinfecting surfaces. This fact sheet reminds you how to use chemicals safely and compliantly.

Workplace Tips

Ensure Easy SDS Access

Make sure anyone working with hazardous chemicals can easily find and understand Safety Data Sheets (SDSs).

Wear the Right PPE

Always inspect and wear required or SDS-recommended personal protective equipment when handling chemicals.

Use Labels

Label all secondary containers with necessary product, supplier, hazard, and precautionary information.

Provide Training + Maintain Inventory

Account for hazard communication training and keep your chemical inventory updated.

Sanitize? Clean? Disinfect?

These three terms are sometimes used interchangeably, but they mean different things. You'll need a combination of all 3 to control the spread of germs.

Sanitize

Reduce germs.

If soap and water are not available, using a sanitizer with at least 60% alcohol can lower the number of germs to safer levels.

Clean

Remove germs.

Cleaning physically removes germs, dirt, and impurities from surfaces and it lowers the risk of spreading infection.

Disinfect

Kill germs.

Disinfectants use chemicals to kill germs on surfaces. The EPA has a [list of disinfectants](#) that meet its criteria for use against COVID-19.

Household Tips

Use Original Containers

Keep chemical products in their original bottles or containers. Do not use food containers to store chemical products.

Always Read the Label

Always read the label before using a product that may be poisonous.

Never Mix Products

Never mix household products together. For example, mixing bleach and ammonia produces toxic gases.

Ventilate + Wear Protective Clothing

Open windows and wear protective clothing (gloves, long sleeves, long pants, shoes) if you use chemicals.
