Industry Notice – Southern Nevada

Re: EV Allowance Adder for Residential Rule 9 Projects

Effective May 1, an incremental allowance adder will be available to support electric vehicle (EV) capable infrastructure for new residential projects that have yet to execute a Rule 9 line extension agreement. These additions to NV Energy's RS & RM allowance schedules (see Rule 9, Attachment 3, Page 80), increase the total allowance amounts available for applicable projects and will support the additional installation requirements necessary to prepare for current or future EV capable development. The adders are available for eligible new installation projects in addition to the current allowance. Customers required to start a Rule 9 project with NV Energy to upgrade existing facilities to support new/future EV chargers may also benefit from the adder.

Single family homes installing EV capable facilities will be eligible to receive this allowance adder. Multi-family development installing EV capable facilities behind the meter will receive the allowance adder for each unit, provided that the facilities share the common meter with the customer's residential unit. Multi-family development installing EV chargers on a separate meter from the tenants/homeowners are not qualified to receive the adder. In these circumstances, only the standard Rule 9 allowance will be applied. Below are the new allowances to be applied to residential projects that are installing EV capable infrastructure.

Highlights

- Starting May 1, an additional EV Allowance Adder will be available to support EV capable development
- The EV Allowance Adder is available to single family and multi-family projects
- The EV Allowance Adder is in addition to existing available allowances per Rule 9

Rate Class	Allowance
RS (Residential Single Family), Per Unit	$3,890
***NEW* EV Allowance Adder**	**$1,751**
RM (Residential Multi-Family), Per Unit	$982
***NEW* EV Allowance Adder**	**$769**

If you have any questions about how the EV Allowance Adder can be applied to your project, please contact our New Development Center at 702-402-8400.

Sincerely,

Eric Schwarzrock
