YMWIC 2025 Summer Programs

Martin Luther King High School Summer Enrichment Program

This summer, Scholars in the MLK Chapter of the YMWIC Foundation have been busy building critical life skills, exploring their futures, and strengthening their leadership potential through a dynamic and enriching Summer Program.

Throughout July, Scholars have participated in a wide variety of activities designed to prepare them for college, careers, and community impact. Highlights include college tours to Drexel University, Delaware County Community College, Ursinus College and Immaculata University, where Scholars had the opportunity to explore campus life, learn about admissions, and envision themselves pursuing higher education.

In preparation for the working world, Scholars took part in resume writing workshops, giving them a chance to practice professionalism and build confidence. They also tackled real-world financial literacy skills through a budgeting project—tasked with planning how to save and purchase a car responsibly.

Scholars spent time learning about different post-high school pathways, including certificate programs, trade schools, associate and bachelor's degrees, and professional programs. They also explored college majors and degree options, helping them begin to chart a path that aligns with their interests and goals.

Hands-on learning continued with STEM and team-building challenges, where students collaborated to solve problems, build creative structures, and develop their critical thinking and communication skills. One especially exciting highlight were the field trips to Golf Zone, where Scholars enjoyed a well-earned day of fun while practicing focus and patience on the course.

In addition to all of these experiences, Scholars have been hard at work on their Community Impact Projects—researching local issues and developing thoughtful solutions to create change in the world around them.

The MLK Summer Enrichment Program has not only prepared our Scholars with tools for success, but has also empowered them to envision a bright future and take meaningful steps toward it. We are incredibly proud of their growth, curiosity, and leadership throughout this transformative summer.
