

Scholar Spotlight

Jace Richardson West Chester Chapter

Scholar Jace Richardson is in the 3rd grade at East Bradford Elementary School. He joined YMWIC this year and has enjoyed the workshop at West Chester University testing Heart Rates the most so far. He has also been inspired by robotics and encouraged to work harder on his robot.

Jace would like to be a Botanist and a Robotics Engineer in the future and has West Chester University in mind. He would tell others who don't know about YMWIC that, "It is a place that can help you improve in science, engineering, math and robotics. Since Academic Tutoring is provided throughout the week, they also can help you improve on your schoolwork and grades."

In his free time Jace enjoys experimenting with science by testing things and seeing what might work and engineering by taking things apart that don't work and putting things together. He also likes playing video games, reading, playing with his friends, drawing, riding his bike, and roller blades. He participates in ice and floor hockey and plays guitar and violin.
