Scholar Spotlight

Mohamed Elkhoully **Coatesville Chapter**

Meet Mohamed Elkhoully, a dedicated 12th grade Scholar from Downingtown East High School who is passionate about science and technology. Mohamed's favorite subject is Science; and outside the classroom, he enjoys staying active as a member of his school's wrestling team and participating in various club sports. In addition to his athletic pursuits, Mohamed is involved in after-school coding, sharpening his skills and preparing for his future career aspirations.

With a strong interest in Computer Science, Mohamed plans to pursue a degree in this field after high school. His dream college? Carnegie Mellon University, a top-tier institution renowned for its Computer Science Program. In his free time, Mohamed enjoys working out at the gym and playing video games, striking a balance between his love for fitness and gaming.

When asked about his role models or his favorite part of YMWIC, Mohamed is still exploring his influences and experiences; but one thing is for sure: he's excited for the future, especially college. If Mohamed could give his 18-year-old self advice, it would be to seek help with coding early on, emphasizing his dedication to mastering his craft.

We're excited to see Mohamed's journey unfold as he continues to work towards his goals and pursue his passion for Computer Science. Keep up the great work, Mohamed!
