March 2026 Science Expo

YMWIC 15th Annual Science Expo

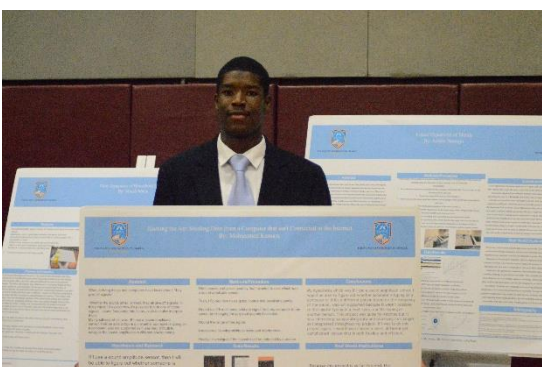

On Saturday, February 21, 2026, YMWIC held its 15th Annual Science Expo. Scholars from all nine chapters throughout the region came together at B. Reed Henderson High School to present their Science Projects. Having started their projects in September 2025, Scholars have been eagerly awaiting this moment to describe their scientific process and present their data and results to the judges for the chance to win first, second, or third place in their Scholar group.

For their projects, Scholars were tasked with completing several benchmarks during the program year, including background research, conducting an experiment, writing a lab report based on their findings, and creating a display board and PowerPoint slide show to present at the Expo. During the morning of the Expo, Scholars presented their projects to groups that included family, friends, community members, and volunteer judges. After the conclusion of presentations, the judges collaborated for score tabulation while the Scholars proceeded to the gymnasium for the exhibition portion of the event. This portion of the event was open to the public and gave our community the opportunity to see the Scholars' hard work in action. Scholars' boards were on display in the gymnasium, and Scholars were on hand to discuss their projects with attendees as they walked through. At the conclusion of the exhibit hour, awards were presented to the top scoring three projects by Scholar group.

The event was a success, largely due to our many volunteers and community members who attended. We thank everyone for their support at this event, which allowed our Scholars the opportunity to inspire us with all of their hard work. Congratulations to all of our Scholars for participating, and to those who won their Scholar groups. Amazing work and job well done!
