

Secure Healthcare Data Sharing

CHECKLIST

PAT CAT

To get started with secure healthcare data sharing, the following are some simple questions to ask yourself.

- Do you have a Data Sharing Agreement, with your PHN?
- Does your software enable patient 'opt out'?
- What data sharing options are available to your practice i.e. matched to your patient management system?
- How does your data sharing software de-identify data?
- How does your data sharing software securely transfer consented data?
- How does your data sharing software manage consent?
- Does your data sharing software store your data during secure file transfer?
- Is data transferred directly from your practice to your PHN?

Please contact your PHN for further information.

The RACGP, AMA and other industry bodies are also recommended reputable information sources.

Together we're shaping our future health
