Waste Wise - Smarter Audits with AI Have you ever wondered how much of our “trash” is actually recyclable, compostable, or not waste at all? From classrooms and lunchrooms to entire buildings and districts, rethink waste through a STEM-powered lens with SWANCC’s new AI-driven data collection program - where technology, data analysis, and environmental science come together to uncover insights, spark critical thinking, and drive real-world sustainability solutions.

Digging Deeper - Vermicomposting Initiative includes SWANCC’s popular “Beneath Our Feet” soil program and continues with hands-on workshops where students learn how to set up and maintain vermicompost ecosystems at school. Vermicompost ecosystems are funded through SWANCC’s Waste Grant program. All materials will be provided.

Right Now! Student Led Action Grants opens the door for students to go beyond posters and announcements. This SWANCC sponsored Waste Reduction Grant (up to \$300 each) empowers students to take action; put their ideas and passion into place “Right Now”! A short student friendly application, teacher supervisor, and agreement to a simple follow-up survey are all that is needed and materials will be sent to the school’s doorstep! Available for grades 2-12.
