

Established in 1932, Sensenich has long been recognized for its reputation on quality, performance and customer service. Their aluminium propellers for general aviation aircraft such as Cessna and Piper along with experimental aircraft such as Van's RV and Glassairs are well-renowned.

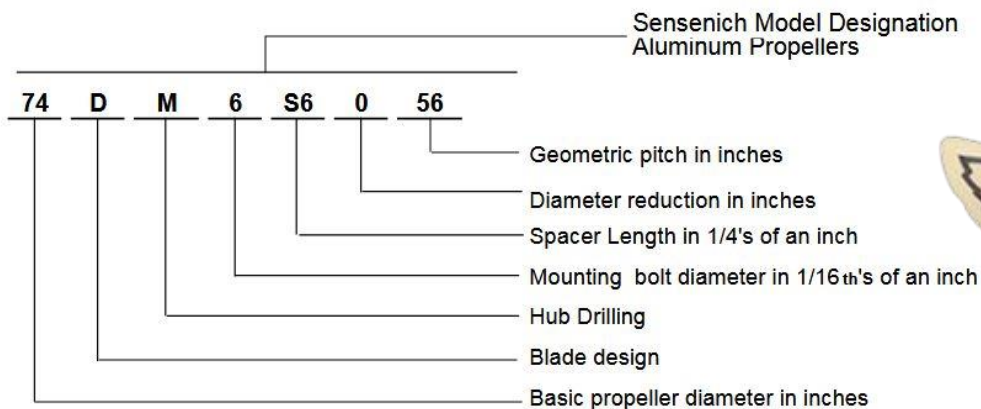

Now their full range of metal propellers and accessories are available through Adams Aviation, as an authorised distributor, with many of the most popular models available from our stock.

All Sensenich aluminium propellers are manufactured from 2025 forged aluminium. The propellers are CNC machined and hand-finished to very tight tolerances. Each propeller then goes through a rigid 56 point inspection to assure you of the highest quality, most problem free propeller available.

All aluminium propellers are vibration tested before being approved for use on any engine and come with a warranty period of twenty-four (24) months or two hundred (200) hours whichever occurs first from date of sale.
