Bose® A20® Aviation Headset

Better sound through research®

The **Bose® A20® Aviation Headset** is engineered to be more comfortable and provide more noise reduction than any headset Bose® ever made, while still delivering the acclaimed clear audio you expect from Bose®.

Fly with it once, then try flying without it.

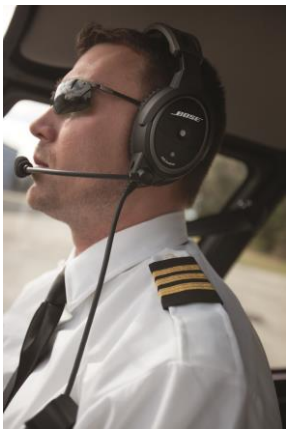

The main advantages include:

- **Certified product, which can be used in Airlines.**
  The A20® headset is certified to FAA TSO-C139, and EASA ETSO-C139 standards.

- **Preferred ANR headset, many pilots' choice.**
  It provides 30% greater noise reduction than conventional aviation headsets, which helps you stay focused on your flying.

- **Light weight.**
  It's among the lightest of all active noise cancelling headsets, with a weight of just 12 ounces (340 grams).

- **Clear communication.**
  The A20® headset provides clear audio with active equalization and a high-performance microphone.

- **Comfortable.**
  Stable fit with 30% less clamping force than conventional aviation headsets.

- At least 45 hours of typical headset use from just two (2) AA alkaline batteries.

In addition, the A20® headset offers a full range of features, including:

- A Bluetooth® audio and communications interface for connectivity with your communications and navigation devices*
- Customizable audio prioritization control with "mute" and "mix" settings
- Simple, intuitive operation for plug-and fly convenience
- Optional coil cord*
- You can choose the left or right ear cup to connect the mic.
- There's also flexible power circuitry* with auto-on that switches to and from battery power and aircraft power.

(*Available in certain variants of the headset.)
