-

Hear first hand from the Getting to Affordability (G2A) Innovation Team who have been working to ensure TCoC relevance as the market moves from a volume to a value-based payment system. The Innovation Team formed as a subset of the Network for Regional Healthcare Improvement's (NRHI) G2A Phase III project team with the goals of recognizing, evaluating, and synthesizing innovative solutions to measuring total cost of healthcare. Led by Minnesota Community Measurement, the team consisted of technical experts from regions across the country who have collaborated to measure and report HealthPartners'® Total Cost of Care in a standardized manner since November 2013.

Join us on **Tuesday, August 14** from **3 – 4 pm ET** as the Innovation Team shares their findings. Issues and innovations discussed will include:

- Missing Data (payments outside the claims system, encounter claims, exclusion of specific claim types)
- Data Comparability (coding intensity variation, truncation adjustment)
- Data Expansion (utilization metrics and risk adjustment)
