

## IGNITE RESCUE PACKAGE

Official Ellie Mae Pro  
Consulting Partner

### IGNITE RESCUE PACKAGE

With the constant change of loan product restrictions, guidelines and client status, the Ignite Rescue Package has been created to assist clients with identification of temporary loan fallout, pipeline management and reporting to track the changing pipeline based on market changes.

This package will assist clients in the current environment in addition to future environments when products and offerings return to the market.

### "ON HOLD" LOAN IDENTIFICATION

With the rapid changes in the market, a file does not need to be adverse, but rather put "on hold" for reference and tracking.

The on hold functionality will track any loan which cannot be closed today (for any reason) but can be closed with a future update or change. The on hold classification automatically transfers these loans into a designated ON HOLD folder using our Auto Folder Transfer Tool allowing these loans to be taken out of the active pipeline.

### IGNITE PIPELINE OPTIMIZER (IPO)

The IPO allows business owners and managers the ability to easily query their pipeline based on market changes and updates to view their possible exposure and/or concentration in a particular product or area.

This tool will run a search of your entire pipeline based on your search criteria, and provides a summary report of loans that fit that criteria.

The IPO will also provide the ability to highlight those loans to be prioritized or put on hold based on your selection criteria.

## LOAN VALIDATION TOOL

With so many investor requirements and product restrictions changing, the need to have your users aware of these changes immediately has never been greater. The loan validation tool is fully customizable and can compare any data element within a loan file including: FICO score, employment, LTV, DTI and Loan Product.

### Common Use Cases:

- Compares current file to how it was locked
- Compares file to how it was last underwritten
- Compares current loan or final underwrite

LVT includes business rules to prevent a file from closing if discrepancies exist

## IGNITE REPORT SCHEDULER

With the rapidly changing market, you do not want to have to manually run Encompass reports to start your day. The Ignite Report Engine will automatically generate and distribute key Encompass reports to your inbox each morning.

This reporting set will provide you with the data and information to start your day and hit the ground running.

The Report Scheduler includes three Encompass reports.

## CUSTOM PACKAGE PRICING CAN BE CREATED UPON REQUEST
